</table>
* Smallest component weight for part counting - under lab conditions:
  ➢ There are ideal ambient conditions for high-resolution counting
  ➢ The parts to be counted are not scattered

** Smallest component part for part counting – under normal conditions:
  ➢ There are unsteady ambient conditions (draft, vibrations)
  ➢ The parts to be counted are being scattered

2 Declaration of conformity

The current EC/EU Conformity declaration can be found online in:

www.kern-sohn.com/ce

For verified weighing scales (= weighing scales assessed for conformity) a declaration of conformity is included in the scope of delivery.

3.3 Display
Apart from the display of the weighing result, all functions of the menu may be accessed from here. The display will vary, depending on the weighing scale being either in operating or setting mode.
Special keys (e.g. CAL-, TARE-, PRINT-key) provide fast and purposeful access to the individual setup menu. The navigation keys allow intuitive control.

Display example operating mode:
The display is sub-divided into four areas.

4 Basic Information (General)

4.1 Proper use
The balance you purchased is intended to determine the weighing value of material to be weighed. It is intended to be used as a “non-automatic balance”, i.e. the material to be weighed is manually and carefully placed in the centre of the weighing pan. As soon as a stable weighing value is reached the weighing value can be read.

4.2 Improper Use
Do not use balance for dynamic add-on weighing procedures, if small amounts of goods to be weighed are removed or added. The "stability compensation“ installed in the balance may result in displaying an incorrect measuring value! (Example: Slowly draining fluids from a container on the balance.)
Do not leave permanent load on the weighing pan. This may damage the measuring system.
Impacts and overloading exceeding the stated maximum load (max) of the balance, minus a possibly existing tare load, must be strictly avoided. Balance may be damage by this.
Never operate balance in explosive environment. The serial version is not explosion protected.
The structure of the balance may not be modified. This may lead to incorrect weighing results, safety-related faults and destruction of the balance.
The balance may only be used according to the described conditions. Other areas of use must be released by KERN in writing.

4.3 Warranty
Warranty claims shall be voided in case

- Our conditions in the operation manual are ignored
- The appliance is used outside the described uses
- The appliance is modified or opened
- Mechanical damage or damage by media, liquids, natural wear and tear
- The appliance is improperly set up or incorrectly electrically connected
- The measuring system is overloaded
4.4 Monitoring of Test Resources
In the framework of quality assurance the measuring-related properties of the balance and, if applicable, the testing weight, must be checked regularly. The responsible user must define a suitable interval as well as type and scope of this test. Information is available on KERN’s home page (www.kern-sohn.com) with regard to the monitoring of balance test substances and the test weights required for this. In KERN's accredited DKD calibration laboratory test weights and balances may be calibrated (return to the national standard) fast and at moderate cost.

5 Basic Safety Precautions

5.1 Pay attention to the instructions in the Operation Manual
☑ Carefully read this operation manual before setup and commissioning, even if you are already familiar with KERN balances.
☑ All language versions contain a non-binding translation. The original German is binding.

5.2 Personnel training
The appliance may only be operated and maintained by trained personnel.

6 Transport and storage

6.1 Testing upon acceptance
When receiving the appliance, please check packaging immediately, and the appliance itself when unpacking for possible visible damage.
6.2 Packaging / return transport

- Keep all parts of the original packaging for a possibly required return.
- Only use original packaging for returning.
- Prior to dispatch disconnect all cables and remove loose/mobile parts.

Illustration example models $d = 0.0001 \text{ g}$

- Reattach possibly supplied transport securing devices.
- Secure all parts such as the glass wind screen, the weighing platform, power unit etc. against shifting and damage.

- Put network adapter and accessories in the small box

- Lift scale with both hands
7 Unpacking, Setup and Commissioning

7.1 Installation Site, Location of Use
The balances are designed in a way that reliable weighing results are achieved in common conditions of use. You will work accurately and fast, if you select the right location for your balance.

Therefore, observe the following for the installation site:

- Place the balance on a firm, level surface;
- Avoid extreme heat as well as temperature fluctuation caused by installing next to a radiator or in the direct sunlight;
- Protect the balance against direct draughts due to open windows and doors;
- Avoid jarring during weighing;
- Protect the balance against high humidity, vapours and dust;
- Do not expose the device to extreme dampness for longer periods of time. Non-permitted condensation (condensation of air humidity on the appliance) may occur if a cold appliance is taken to a considerably warmer environment. In this case, acclimatize the disconnected appliance for ca. 2 hours at room temperature.
- Avoid static charge of weighed items or weighing container.

If electro-magnetic fields or static charge occur, or if the power supply is unstable, major deviations on the display (incorrect weighing results) are possible. In that case, the location must be changed.

7.2 Unpacking and checking
Remove device and accessories carefully from packaging, remove packaging material and place device at the planned work place. Check if that there has been no damage and that all packing items are present.
Scope of delivery / serial accessories

1 Balance
2 Weighing pan
3 Carrier weighing pan
4 Centring ring (Models d = 0.0001 g only)
5 Protective cover
6 Mains adapter
7 Holder for adapter cable (Models d = 0.0001 g only)
8 Operating manual
9 External electronics box
10 Guard plate
11 Windshield
12 Multi-function weighing platform
13 Support multi-function weighing platform

Models d = 0.00001 g/0.0001 g only:

9 External electronics box
10 Guard plate
11 Windshield
12 Multi-function weighing platform
13 Support multi-function weighing platform
7.2.1 Placing

The right place is decisive for the accuracy of the weighing results of high-resolution precision balances (see chap. 7.1).

1. Attach holder for adapter cable (Models \(d = 0.0001\) g only)

\[\Rightarrow\] Pull off protective film and attach as shown on image.

2. Installation of weighing plate

Models \(d = 0.0001\) g

\[\Rightarrow\] Attach centering ring, carrier of weighing plate and weighing plate in order.

\[\Rightarrow\] Attach the safety hood
Mode. \( d = 0.00001 \text{ g}/0.0001 \text{ g} \)

- Attach centering ring, carrier of weighing plate and weighing plate in order.
- Attach the safety hood

- Place the guard plate carefully in the weighing chamber
3. Install the multi-function weighing platform (Models = 0.00001 g/0.0001 g only)

- Disconnect scale from power supply.
- Remove standard weighing plate as shown on image.
- Install multi-function weighing platform together with the support. Pay due attention to centring!

Application examples:

Adjustment will be required after exchanging the weighing platform, for instructions see chap. 8

Standard weighing platform  Support multi-function weighing platform
4. Levelling

⇒ Level balance with foot screws until the air bubble of the water balance is in the prescribed circle.

⇒ Check levelling regularly

7.3 Mains connection

Select a country-specific power plug and insert it in the mains adapter.

Check, whether the voltage acceptance on the scales is set correctly. Do not connect the scales to the power mains unless the information on the scales (sticker) matches the local mains voltage.

Only use KERN original mains adapter. Using other makes requires consent by KERN.

Important:

⇒ Before starting your weighing balance, check the mains cable for damage.
⇒ Ensure that the power unit does not come into contact with liquids.
⇒ Ensure access to mains plug at all times.
7.3.1 Turning On the Power

Models \( d = 0.0001 \, \text{g} \)  

Mode. \( d = 0.00001 \, \text{g} / 0.0001 \, \text{g} \)

Supply power to balance via mains adapter. The display lights up and the balance carries out a selftest. Internal adjustment will be started automatically (See chap.8.3.2). The motor noise of the loading system for the internal adjustment weight will be audible.

You can cancel the adjustment by pressing the ON/OFF key.

The selftest is completed when „OFF“ appears on the display. From that point onwards the weighing scale will be in standby mode. The weighing balance will remain switched on as long as it is connected to the power supply.

To turn the display on/off, press the ON/OFF key.

When the log-in function is enabled, use the navigation keys to select the respective user and enter password, see chap. 12.7.

7.4 Initial Commissioning

In order to obtain exact results with the electronic balances, your balance must have reached the operating temperature (see warming up time chap.1). During this warming up time the balance must be connected to the power supply (mains, accumulator or battery). The accuracy of the balance depends on the local acceleration of gravity. Strictly observe hints in chapter Adjustment.
7.5 Connection of peripheral devices
Before connecting or disconnecting of additional devices (printer, PC) to the data interface, always disconnect the balance from the power supply. With your balance, only use accessories and peripheral devices by KERN, as they are ideally tuned to your balance.

8 Adjustment
As the acceleration value due to gravity is not the same at every location on earth, each balance must be coordinated - in compliance with the underlying physical weighing principle - to the existing acceleration due to gravity at its place of location (only if the balance has not already been adjusted to the location in the factory). This adjustment process must be carried out for the first commissioning, after each change of location as well as in case of fluctuating environment temperature. To receive accurate measuring values it is also recommended to adjust the balance periodically in weighing operation.

- Observe stable environmental conditions. A warming up time (see chapter 1) is required for stabilization.
- Ensure that there are no objects on the weighing pan.
- Avoid vibration and air flow.
- Always carry out adjustment with the standard weighing platform in place.
- To cancel internal adjustment, press the ON/OFF key.
- When an optional printer is connected and the GLP function is connected, the adjustment log will be edited, see chap. 8.4

8.1 Automatic adjustment via PSC function
Force-compensated scales react sensitively to changes in temperature. The higher the sensitivity of the scale, the more pronounced the effect. The temperature controlled PSC function enables the scale to automatically correct this effect.

PSC stands for Perfect Self Calibration and facilitates fully automatic internal scale adjustment by means of an internal weight, based on time and/or temperature criteria.
Adjustment in weighing mode is carried out automatically under the following conditions:

1) If there is a change in ambient temperature (Δt 1°C)
2) When about four hours has passed since the previous calibration.
3) When the balance is switched from standby status to weighing mode and condition (1) or (2) has been met.
If one of the above conditions was met in weighing mode, the weight symbol flashes for about two minutes in order to notify the pending adjustment; During operation, the display will automatically change and the motor sound of the weight loading system is heard. In order to ensure proper PSC operation, prevent vibrations and air flow.

- The PSC function will be enabled throughout in verified models.
- Also, no measurements can be made during automatic adjustment.
- When the weight symbol starts flashing while the weighing platform is loaded the following message will appear

  Unload weighing plate

- In order to prevent that adjustment is starting during a measuring sequence, press the ON/OFF key immediately when the following display appears. This will cancel the adjustment and you can proceed with the measuring sequence. Sometime later adjustment will be requested again by the flashing weight symbol.
8.2 Time-controlled automatic adjustment

With the help of its internal adjusting weight and integrated clock the balance can be set to carry out automatic adjustment at set times (up to three times daily). This function is a very convenient function, when adjustment reports are desired to be made for regular adjustments, or when wishing span adjustments during break times to avoid interruption of measurement work.

The weight symbol  blinks for about two minutes as notification of span calibration before it begins. Automatic adjustment can be stopped by actuating the [ON/OFF] key during this message.

Parameter setting:

Press and hold the CAL-key for approx. 3 sec. and the menu for <CAL key> setting will be displayed.

Use the navigation keys to select <Timer CAL> and confirm using the OK-key.

Select first time <Timer 1> and confirm using the OK-key.

Select setting [on] or [off] and confirm using the OK-key.

Select [Setting] to enter time.

Use the navigation keys to enter time and confirm using the OK-key.

Repeat these operating steps to set the time for <Timer 2> / <Timer 3>.
8.3 Manual adjustment via key [CAL-key]

8.3.1 Setting adjustment function for CAL-key

It is possible to start the preset adjustment method without having to access the menu. The Set Adjustment Procedure may be set by simply pressing the [CAL]-key when in weighing mode.

Press and hold the CAL-key for approx. 3 sec until the <CAL key> setting menu appears.

Confirm using the OK-key and the available settings will be displayed.

- Adjustment with internal weight, see chap. 8.3.2
- For adjustment test using internal weight, see chap. 8.3.3
- Adjustment using external weight, see chap. 8.3.4
- Adjustment test with external weight, see chap. 8.3.5

Select Settings with the help of the navigation keys and confirm using the OK-key.

Use the ON/OFF button to return into weighing mode

8.3.2 Adjustment with internal weight

Ensure that the CAL-key is assigned to the <Internal Weight Calibration> function, see chap. 8.3.1.

Press CAL key, adjustment is started.

After successful adjustment the balance automatically returns to weighing mode. In case of an adjustment error (e.g. objects on the weighing plate) the display will show an error message, repeat adjustment.
8.3.3 Adjustment test with internal weight

During adjustment tests the balance automatically compares the saved value of the adjustment weight with the actual value. This is only a check, i.e. no values are changed.

Ensure that the CAL-key is assigned to the <Internal Weight Test> function, see chap. 8.3.1.

To start the test, press the CAL-key.

The difference to the previous adjustment will be displayed.

8.3.4 Adjustment with external weight

Ensure that the CAL-key is assigned to the <External Weight Calibration> function, see chap. 8.3.1.

Press the CAL-key and the weight value for the adjustment weight will be flashing on the display. (To change the weight value, follow the instruction on the display*).

Put the required adjustment weight carefully in the centre of the weighing pan. Close wind screen doors completely. Wait until the request for removing the adjustment weight is displayed.

Take away adjustment weight.

*The adjustment weight to be used depends on the capacity of the scale. Carry out adjustment as near as possible to the balance’s maximum weight (recommended adjustment weight see chap. 1). Weights of different nominal values may be used for adjustment but are not optimal for technical measuring. Info about test weights can be found on the Internet at: http://www.kern-sohn.com
8.3.5 Adjustment test with external weight

Ensure that the CAL-key is assigned to the <External Weight Test> function, see chap. 8.3.1.

Press the CAL-key and the weight value for the adjustment weight will be flashing on the display. (To change the weight value, follow the instruction on the display).

Put the required adjustment weight carefully in the centre of the weighing pan. Close wind screen doors completely. Wait until the request for removing the adjustment weight is displayed.

The difference to the previous adjustment will be displayed.
8.4 Adjustment log
If an optional printer is connected and the GLP function enabled, this will be followed by automatic log output after every adjustment.

8.5 Regular inspections

The ABP series supports regular inspection of your scale. This function may be used to check repeatability, off-centre stress (off-centre load errors) and linearity. The instructions on the display support the implementation of individual steps.

Parameter setting:

Call up menu:
Press and hold the CAL-key for approx. 3 sec. and the menu for <CAL key> setting will be displayed.

Use the navigation keys to select <Periodic inspection> and confirm using the OK-key.

1. Settings Repeatability

Select <Repeatability insp. 1> and confirm using the OK-key.

Select desired setting and confirm using the OK-key.

To enter the weight value for the test weight, select <Weight value> and confirm using the OK-key.

Use the navigation keys to enter the value and confirm using the OK-key.

Repeat these operating steps to set all other settings for <Tolerance> / <Repeat Counts>.

Return to menu by .

2. Settings off-centre load

Repeat these operating steps for Settings as shown for "Item 1 Repeatability".
3. Settings linearization

Repeat these operating steps for Settings as shown for "Item 1 Repeatability".

Performing test sequence:

Call up menu:
Press and hold the CAL-key for approx. 3 sec, the <CAL key> setting menu will appear.

Use the navigation keys to select <Periodic inspection> and confirm using the OK-key.

Select desired test and confirm using the OK-key.

Select <Start> and confirm using the OK-key.
Follow the instructions on the display.
9 Verification

General introduction:
According to EU directive 2014/31/EC balances must be officially verified if they are used as follows (legally controlled area):
  a) For commercial transactions if the price of goods is determined by weighing.
  b) For the production of medicines in pharmacies as well as for analyses in the medical and pharmaceutical laboratory.
  c) For official purposes
  d) For manufacturing final packages
In cases of doubt, please contact your local trade in standard.

Verification notes:
An EU type approval exists for balances described in their technical data as verifiable. If a balance is used where obligation to verify exists as described above, it must be verified and re-verified at regular intervals.
Re-verification of a balance is carried out according to the respective national regulations. The validity for verification of balances in Germany is e.g. 2 years. The legal regulation of the country where the balance is used must be observed!

Verification of the balance is invalid without the seal.
The seal marks attached on verified balances point out that the balance may only be opened and serviced by trained and authorised specialist staff. If the seal mark is destroyed, verification loses its validity. Please observe all national laws and legal regulations. In Germany a re-verification will be necessary.

Position of the official seals
10 Basic Operation

10.1 Activate standard weighing mode

<table>
<thead>
<tr>
<th>Status balance</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The balance is now in stand-by mode</td>
<td>Press the ON/OFF button.</td>
</tr>
<tr>
<td>Scale is in a different operating mode</td>
<td>Press F-key</td>
</tr>
<tr>
<td>Balance is in menu</td>
<td>Press the ON/OFF key</td>
</tr>
<tr>
<td>After numeric input</td>
<td>Repeatedly press the ON/OFF key.</td>
</tr>
</tbody>
</table>

10.2 Simple weighing

A warm-up time is required for stabilisation (see chap. 1).

- Wait for zero display, reset to zero using TARE.
- Place the goods to be weighed and close the wind screen doors
- Wait until the stability display appears ( ).
- Read weighing result.

When an optional printer is connected, the weighing value can be edited.

Print-out example with enabled GLP function (see chap. 15.8.3):

<table>
<thead>
<tr>
<th>KERN &amp; Sohn GmbH</th>
<th>Company</th>
</tr>
</thead>
<tbody>
<tr>
<td>TYPE  ABP 300-4M</td>
<td>Model</td>

<tr>
<td>-SIGNATURE-</td>
<td>prepared by</td>
</tr>
</tbody>
</table>
10.3 Taring
The dead weight of any weighing container may be tared away by pressing a button, so that the following weighing procedures show the net weight of the goods to be weighed.

⇨ Put vessel of goods to be weighed on weighing plate and close the wind screen doors.
⇨ Wait until the stability display appears ( ), then press TARE. The weight of the container is now internally saved.
⇨ Weigh the goods to be weighed and close the wind screen doors.
⇨ Wait until the stability display appears ( ).
⇨ Read net weight.

Note:

• The balance is able to only store one taring value at a time.
• When the balance is unloaded the saved taring value is displayed with negative sign.
• To delete the stored tare value, remove load from weighing pan and press TARE.
• The taring process can be repeated any number of times. The limit is reached when the whole weighing range is exhausted.
10.4 Underfloor weighing

Objects unsuitable for placing on the weighing scale due to size or shape may be weighed with the help of the flush-mounted platform. Proceed as follows:

⇒ Switch off the balance.
⇒ Open closing cover (1) at the balance bottom.
⇒ Place weighing balance over an opening.
⇒ Attach weighed good to hook and carry out weighing procedure.

![Fig.1: Underfloor weighing device](image)

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>
| • Always ensure that all suspended objects are stable enough to hold the desired goods to be weighed safely (danger of breaking).
• Never suspend loads that exceed the stated maximum load (max) (danger of breaking) |

Always ensure that there are no persons, animals or objects that might be damaged underneath the load.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>After completing the underfloor weighing the opening on the bottom of the balance must always be closed (dust protection).</td>
</tr>
</tbody>
</table>
10.5 Switch off the balance

⇒ Press the ON/OFF button. The balance is in standby mode, that means that the balance is now in state ready-for-operation. Immediately after switching-on it is ready for operation (press any key) without warm-up time.

⇒ To switch-off the balance completely, separate balance from power supply.

🚫 When you see messages such as Communication do not disconnect scale from power supply.

10.6 Switch-over weighing unit

To return the display to the units previously enabled in the menu press the UNIT-key, see chap. 12.6.

ℹ️ When switching-on the balance, the unit in which the balance has been switched off, will be displayed.

10.7 Change readability (1D/10D) (not available for verified models)
10.8 Display Tare / Net / Gross

In weighing mode press **MENU** button.

Select **<Tare/net/gross display>** and confirm using the **OK**-key.

To display "Tara / Net / Gross"
Select **<on>** setting and confirm using the **OK**-key.

Setting **<on>**

Setting **<off>**
10.9 Display decimal dot as point or comma

Select System Settings and confirm using the OK-key.

Select <Decimal point setting> and confirm using the OK-key.

Select desired setting [Period] or [Comma] and confirm using the OK-key.

Use the ON/OFF button to return into weighing mode
## 11 Menu

### 11.1 Navigation in the menu

</table>
Display examples:

General navigation:

All selectable functions and settings may be accessed by navigating the arrow keys [↑, ↓, ←, →] and confirming by pressing the OK-key.

The framing will indicate the current selection.

When the icon ⚫ is displayed you can press the S-key to access a submenu.

If a scroll bar is shown, further parameters may be displayed by using the navigation keys ↑, ↓.

Menu settings surrounded by square brackets are not available.

To return to the previous menu, press the R-key.

Numerical input, see chap. 3.2.1.

11.1.1 Standard weighing mode

The list of available settings will be displayed.

How to change settings

1. Tare/net/gross display

Use the navigation keys to select the desired settings ↑, ↓ and confirm using the OK-key.
2. Statistical calculation

A submenu will be available by pressing if the icon is displayed.

Use the navigation keys to select the desired setting ↑, ↓ and confirm using the OK-key.

Use return to the previous menu.

11.1.2 Weighing settings
The list of available settings will be displayed.

Confirm using the OK-key. The framing will indicate the current selection.

Select the desired settings using the F-key.

To change your selection, press the OK-key.

Use the navigation keys ↑, ↓ to select the desired settings and confirm using the OK-key.

Press the F-key to select additional settings and make changes as described above.
11.1.3 System Settings

The list of available menu blocks will be displayed.

Confirm using the OK-key. The framing will indicate the current selection. Use the navigation keys ↑, ↓ to select the desired menu block (such as system settings).

Confirm selection by pressing the OK-key.

The list of available settings will be displayed.
Use the navigation keys \( \uparrow, \downarrow \) to select the desired setting (such as brightness).

To change your selection, press the \textbf{OK}-key.

Use the navigation keys \( \uparrow, \downarrow \) to select the desired setting and confirm using the \textbf{OK}-key.

Press the F-key to select additional settings and make changes as described above.
11.1.4 Application settings

The available applications will be displayed. Press the S-key and use the navigation keys ↑, ↓ to select the desired application, such as part counting. The framing will indicate the current selection.

Confirm using the OK-key and the application specific settings will be displayed.

The application specific settings are described in the respective chapters, see chap. 14

11.2 Menu overview

The menu overview is part of the scale’s scope of delivery and supplied in the form of a separate document.
11.3 Resetting the menu
The <Menu reset> menu may be used to reset all scale settings to default settings.

* Factories settings are marked by a “*” in the menu oversight.
* If user management is enabled, menu resetting may only be made by an authorized user.

1. Call System Settings
   ⇒ see chap. 11.1.3.

2. Enable/disable function
   Confirm using the OK-key.
   Use the navigation keys ↑, ↓ to select <Menu reset> and confirm using the OK-key. Password prompt will be displayed. For how to enter a password, see chap. 3.2.1 “Numeric input” and confirm using the OK-key.

   Either

   Enter user-defined password

   or

   Enter standard password [9999] (default setting)

   Confirm query by pressing the OK-key

   The balance returns automatically into weighing mode. All user and application specific settings will be reset to default setting.
11.4 Menu Lock

The menu setting operations can be locked so that the settings cannot be inadvertently changed. This menu lock is set with the following procedure.

1. Call System Settings
   ⇒ see chap. 11.1.3.

2. Enable/disable function

   Confirm using the OK-key.

   Use the navigation keys ↑, ↓, select <Menu lock> and confirm using the OK-key. Password prompt will be displayed. For how to enter a password, see chap. 3.2.1 "Numeric input" and confirm using the OK-key.

   Either

   Enter user-defined password

   or

   Enter standard password [9999] (default setting)

   Confirm query by pressing the OK-key

   Use the navigation keys ↑, ↓ to enable (on) / disable (off) the function and confirm using the OK-key.

3. Return to weighing mode

   Press the ON/OFF key
The icon ![icon] will be displayed while the function is enabled.

- Weighing and adjustment can take place despite menu lock.
- Authorisation for performing this function may be allocated to any user.
- If a menu item selection is attempted in locked status, the message “LOCKED” appears and the menu selection is not allowed. To disable the menu block, select Settings [off].

11.5 Log menu settings
When an optional printer is connected, a list of the current menu settings can be printed out.

1. **Call System Settings**
   - see chap. 11.1.3.

2. **Activate function**

   Confirm using the OK-key.

   Use the navigation keys ↑, ↓ to select <Menu setting output> and confirm using the OK-key.

   Confirm request by pressing the OK-key and printing will start.

   The balance returns automatically into weighing mode.
11.6 Menu history
This function is applied to display the last 10 menu steps.

Use the navigation keys ↑, ↓ to select < → > and the last 10 menu steps will be displayed.
12 Description of individual functions

12.1 Zero setting and tare function

Selectable functions: 

1. **Zero tracking function**
   - See chap. 12.2.
   - This function is used to correct automatically small weight variations which appear directly after switching-on.
   - In the event that small quantities are removed or added to the material to be weighed, incorrect weighing results can be displayed due to the “stability compensation”. (e.g. slow flow of liquids from a container placed on the balance, evaporating processes). When apportioning involves small variations of weight, it is advisable to switch off this function.

2. **Auto tare function**
   - See chap. 12.3.
   - After data output an automatic taring is carried out.

12.2 Zero tracking function

The icon will be displayed while the zero tracking function is enabled.

1. **Call function**
   - See chap. 11.1.2.
   - Press and hold the TARE-key for a long time.
   - Use the navigation keys ↑, ↓ to select <Zero tracking> and confirm using the OK-key.

2. **Enable/disable function**
   - Use the navigation keys ↑, ↓ to enable (on) / disable (off) the function and confirm using the OK-key.

3. **Return to weighing mode**
   - Press the ON/OFF key.
12.3 Auto Tare function

1. Call function
   ⇒ see chap. 11.1.2.

   Use the navigation keys ↑, ↓ to select <Auto tare> and confirm using the OK-key.

2. Enable/disable function
   Use the navigation keys ↑, ↓ to enable (on) / disable (off) the function and confirm using the OK-key.

3. Return to weighing mode
   Press the ON/OFF key
12.4 Settings for Stability and Response

Exists the possibility to tune the stability of the display and the degree of reaction of the balance to the requirements of certain applications or the environmental conditions. Most measurements may be carried out by using default settings. In standard weighing mode, stability and reaction have the same priority. For certain applications such as e.g. dosage do use the dosing mode. In dosing mode the reaction degree has the higher priority. Beside the selection standard / dosing mode the stability of the display and the reaction degree of the balance can additionally adapted in the menu. Please note that in general slowing down reaction times result in higher stability of the set data handling, while speeding up reaction times have an influence on the stability deterioration.

12.4.1 Stability and reaction settings via „Smart Setting display“ (without invoking menu)

If there is a change in ambient conditions the responding qualities or the stability of the scale may be optimised – even during weighing – by simply pressing the key.

![Smart setting display](image)

⇒ In weighing mode press R for Reaction Settings or S for Stability Settings.

**Priority on reaction**

Every time the key is pressed, the priority for the reaction will be increased. The icon ▼ will be moving in the direction of <R>.

**Priority on stability**

Every time the key is pressed the priority for the stability will be increased. The icon ▼ will be moving in the direction of <S>.
12.5 Dosing

Use this function if you wish to increase display speed, e.g. during apportioning. However, please note that the balance is very susceptible to ambience conditions.

The icon \[ \text{̃} \] will be displayed while the function is enabled.

1. **Call function**
   
   ⇒ see chap. 11.1.2.
   
   Select <Filling> and confirm using the OK-key.

2. **Enable/disable function**
   
   Use the navigation keys \[ \text{↑}, \text{↓} \] to enable (on) / disable (off) the function and confirm using the OK-key.

3. **Return to weighing mode**
   
   Press the ON/OFF key.
12.5.1 Standstill width

If the stability display lights up ( ), the weighing result will be stable within the range indicated by the standstill width.

Set range for stability determination:

1. Call function
   ➞ see chap. 11.1.2.

   Use the navigation keys ↑, ↓ to select <Stability detection range> and confirm using the OK-key.

2. Set range for stability determination
   Use the navigation keys ↑, ↓ to select Setting and confirm using the OK-key.

   0.5d  Stability display ( ) very quiet environment

   1000d Stability display ( ) busy environment

3. Return to weighing mode
   Press the ON/OFF key
12.6 Weighing Units

The <Unit setting> menu is used to define which weighing units you wish to apply. By pressing the UNIT key, the display can be switched over to the units enabled before in the menu.

Scales with type approval allow you to change to the following units:

\[ g \rightarrow mg \rightarrow ct \]

1. Call function

Go to weighing mode and press and hold the UNIT-key for approx. 3 sec until the <Unit setting> menu is displayed.

Confirm using the OK-key and the available units will be displayed.

Use the navigation keys to \( \uparrow, \downarrow \) select the unit and confirm using the OK-key.

2. Enable/disable units

Use the navigation keys \( \uparrow, \downarrow \) to enable (on) / disable (off) the function and confirm using the OK-key.

3. Return to weighing mode

Press the ON/OFF key.

12.7 User administration log-in function

The scale has a user administration where individual access rights for administrator and user levels may be defined. The input of a user name and password is required for access.

The administrator can use all the functions and has all rights. Only the administrator is authorised to create new user profiles and to grant access rights. A user on the other hand may not have access to all functions. He/she has limited rights that are defined in the user profile. The maximum of users is limited to 10.
a) Enable/disable function

<table>
<thead>
<tr>
<th>Login function [off]</th>
<th>Login function [on]</th>
</tr>
</thead>
<tbody>
<tr>
<td>All users have administrator rights and full access (default setting).</td>
<td>There is only one administrator and maximal 10 users.</td>
</tr>
</tbody>
</table>

1. Call System Settings
   ⇒ see chap. 11.1.3.

Use the navigation keys ↑, ↓ to select <User settings> and confirm using the OK-key.

2. Enable/disable function

Use the navigation keys ↑, ↓ to enable (on) / disable (off) the function and confirm using the OK-key.

Weighing balance returns to menu.
From this point onwards you will be logged-in as administrator and authorised to change settings.
b) Creating a user profile

Only the administrator may create new user profiles and grant access rights. Changes to a user profile, too, may only be made by the administrator.

1. Select administrator or user

Use the navigation keys to select Administrator or User <Administrator or User 01 - 10> and confirm using the OK-key.

2. Define user selection to be displayed on log-in

Use the navigation keys to select <User ID> and confirm using the OK-key.

Use the navigation keys to select <valid> or <invalid> and confirm using the OK-key.

When selecting <valid> continue with input as described in the next step.

When selecting <invalid> use the ON/OFF-key to return to weighing mode.

3. Changing user name (ID)

Use the navigation keys to select <User name> and confirm using the OK-key.

Enter desired user name (For numeric input see chap.3.2.1)

Confirm selection by pressing the OK-key.

Weighing balance returns to menu.

Here you may change settings as described below.
c) Define password

Different passwords are required according to user or administrator.

<table>
<thead>
<tr>
<th>Type</th>
<th>Administrator password</th>
<th>User Password</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default setting for password</td>
<td>9999</td>
<td>0000</td>
</tr>
<tr>
<td>Log-in</td>
<td>Administrator ID</td>
<td>User ID</td>
</tr>
<tr>
<td>Access rights</td>
<td>All functions and rights</td>
<td>Limited rights defined in user profile. No password will be required if default setting [0000] is used.</td>
</tr>
</tbody>
</table>

Use the navigation keys ↑, ↓ to select <Password > and confirm using the OK-key.

Enter password
(For numeric input see chap. 3.2.1
Confirm selection by pressing the OK-key.
Weighing balance returns to menu.
Here you may change settings as described below.
d) Granting user rights

The administrator defines which of the following activities may be performed by the user.

<table>
<thead>
<tr>
<th>Activity</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Modify settings</td>
<td>Make settings in menu</td>
</tr>
<tr>
<td>Weighing value External output</td>
<td>Data output to external devices</td>
</tr>
<tr>
<td>Using USB flash drive</td>
<td>Access to USB storage space</td>
</tr>
<tr>
<td>Adjustment</td>
<td>Change adjustment settings</td>
</tr>
<tr>
<td>Test</td>
<td>For performing regular inspections see chap. 8.2</td>
</tr>
</tbody>
</table>

Use the navigation keys ↑, ↓ to select activity such as <Modify setting>, to which access rights are to be granted or refused. Confirm selection by pressing the OK-key.

Use the navigation keys ↑, ↓ to select the desired setting and confirm using the OK-key.

Weighing balance returns to menu.

Use the navigation keys ↑, ↓ to select the next menu item such as <Weighing value EXToutp.> and change settings as described above.

Repeat this sequence of operations for all five menu items.

Return to weighing mode:
Press the ON/OFF key
e) Change user name

Use the navigation keys to ↑, ↓ select <User name> and confirm using the OK-key.

Enter desired user name (For numeric entry see chap. 3.2.1)
Confirm selection by pressing the OK-key.

Weighing balance returns to menu.
Here you may change settings as described below.

- The user name will be displayed on the top right of the display during operation and as long as the respective user profile is enabled.
f) Login

When the log-in function is enabled, the list of users will be displayed on log-in.

Use the navigation keys ‼️, ‼️ to select User and confirm using the OK-key.
Password prompt will be displayed.
Enter password and confirm using the OK-key (For numeric entry see chap. 3.2.1).

When a user logs in using the standard password [0000] no password query will be made.
The display will change into operating mode, the selected user will be enabled and will be shown at the top of the display.

- Apart from administrator or user it is also possible to log-in as "Guest".
- A logged-in guest may merely perform weighing.

**Sequence of operations:**
Press the ON/OFF-key when list of users is displayed

The display will then change to operating mode, the selected user <GUEST> will be enabled and shown on the top of the display.
13 Balance settings

13.1 Screen saver

While this function is enabled the scale will automatically change to standby mode after a defined time without a change in load or conditions. You can turn off the function [off] or define a time after which the scale is to change into standby mode. To restart press the ON/OFF-key.

Call System settings (see chap. 11.1.3).

Use the navigation keys ↑, ↓ to select <Screen saver> and confirm using the OK-key.

Use the navigation keys ↑, ↓ to select switch off time and confirm using the OK-key.

Options: off, 5, 10, 15, 20, 30 min.

Use the ON/OFF button to return into weighing mode

13.2 Display settings in operating mode

For calling system settings see chap. 11.1.3.

Use the navigation keys ↑, ↓ to select <OP mode setting> and confirm using the OK-key.

Use the navigation keys ↑, ↓ to select the desired setting and confirm using the OK-key.

Use the ON/OFF button to return into weighing mode
13.3 Balance identification no.
This setting is for the balance ID number that is output along with the adjustment report.

For calling system settings see chap. 11.1.3.

Use the navigation keys ↑, ↓ to select <Balance ID> and confirm using the OK-key.

Use the navigation keys ↑, ↓ to enter name (max. 16 characters) and confirm using the OK-key.

Numerical input, see chap. 3.2.1.

Use the ON/OFF button to return into weighing mode

13.4 Entering date and time
For calling system settings see chap. 11.1.3.

Use the navigation keys ↑, ↓ to select <Date> or <Time> and confirm using the OK-key.

Use the navigation keys ↑, ↓ to enter date or time and confirm using the OK-key.

Numerical input, see chap. 3.2.1.

Use the ON/OFF button to return into weighing mode

13.5 Date format
For calling system settings see chap. 11.1.3.

Use the navigation keys ↑, ↓ to select <Date output style> and confirm using the OK-key.

Use the navigation keys ↑, ↓ to set the display format and confirm using the OK-key.

Use the ON/OFF button to return into weighing mode
13.6 Brightness of display

For calling system settings see chap. 11.1.3.
Use the navigation keys ↑, ↓ to select <Brightness> and confirm using the OK-key.

Use the navigation keys ↑, ↓ to set brightness and confirm using the OK-key.
Use the ON/OFF button to return into weighing mode.

13.7 Audio signal on pressing key or display of stability

For calling system settings see chap. 11.1.3.
Use the navigation keys ↑, ↓ to select <Sound> and confirm using the OK-key.

Use the navigation keys ↑, ↓ to select setting [on] or [off] and confirm using the OK-key.
Use the ON/OFF button to return into weighing mode.

13.8 User language

For calling system settings see chap. 11.1.3.
Use the navigation keys ↑, ↓ to select <Language> and confirm using the OK-key.

Use the navigation keys ↑, ↓ to select language and confirm using the OK-key.
Use the ON/OFF button to return into weighing mode.
### 14 Application Functions

Overview of available applications:

<table>
<thead>
<tr>

<td>-</td>
</tr>
</tbody>
</table>

- The balance starts in the mode, in which it has been switched off.
- To switch between application and weighing mode press the F-key (not available for statistics, check weighing, minimal weight)
14.1 Parts counting

With parts counting you can either count parts into a container or remove parts from a container. To count a greater number of parts the average weight per part has to be determined with a small quantity (reference quantity). The larger the reference quantity, the higher the counting exactness. High reference must be selected for small parts or parts with considerably different sizes.

14.1.1 Settings

Enable function and calculate single weight by weighing a known reference quantity

Selecting an application (see chap. 11.1.4)

The available applications will be displayed.

Use the navigation keys ↑, ↓ to select <Piece counting measurement>. The framing will indicate the current selection. Confirm using the OK-key and the application specific settings will be displayed.

1. Storage location no. / name for initial input

Use the navigation keys ↑, ↓ to select storage location and confirm using the OK-key.

During the initial entry there will be a display where you can enter a storage name. Use the navigation keys ↑, ↓ to select storage location and confirm using the OK-key.

If required, change name and confirm using the OK-key.

To overwrite a stored single weight continue by referring to chap. 14.1.4
2. Set reference

Enter reference quantity and confirm using the OK-key.

Load the number of parts corresponding to the selected reference quantity. Wait until stability display has settled, then confirm using the OK-key.

The scale will calculate the average single weight and display the result. Confirm using the OK-key.

Enter single weight as numeric value

⇒ In counting mode, press MENU-key.
⇒ Use the navigation keys ↑, ↓ to select <Unit weight> and confirm using the OK-key.
⇒ Enter known single weight and confirm using the OK-key.
14.1.2 Setting the display

⇒ In counting mode, press **MENU**-key.
⇒ Use the navigation keys ↑, ↓ to select <Display with load weight> and confirm using the **OK**-key.
⇒ Select <on> or <off> and confirm using the **OK**-key.

**Setting <off>**

![Setting <off>](image)

**Setting <on>**

![Setting <on>](image)

14.1.3 Part counting

⇒ In counting mode, select stored single weight and confirm using the **OK**-key (chap. 14.1.1).

⇒ Put empty container on the scale and tare.

⇒ Fill weighing goods into the container and read the piece quantity.
14.1.4 Change settings

⇒ In counting mode, press **Menu-key**.

⇒ Select <Changing registration> and confirm using the **OK-key**.

The following changes may be made:

Product name:
Change name and confirm using the **OK-key**.

Reference quantity:
Change reference single weight and confirm using the **OK-key**.

Weight according to selected reference quantity:
Load weight and confirm using the **OK-key**.

⇒ The changes made will be displayed.

⇒ To return to counting mode, press the **ON/OFF-key**

14.1.5 Switching between counting and weighing mode
14.2 Percent determination

Percent weighing allows to display weight in percent, in relation to a reference weight.

The balance offers two possibilities:

1. Loaded reference weight = 100 %
2. Loaded reference weight = user defined

14.2.1 Settings

 Activate function

Selecting an application (see chap. 11.1.4)

The available applications will be displayed.

Use the navigation keys ↑, ↓ to select calculation of percentage. The framing will indicate the current selection.

Confirm using the OK-key and the application specific settings will be displayed.

100PER1 -3:
Loaded reference weight = 100 %

ANYPER1, 2:
Loaded reference weight = user defined [%]
During the **initial entry** there will be a display where you can enter a storage name. Use the navigation keys ↑, ↓ to select storage location and confirm using the OK-key.

If required, change name and confirm using the OK-key.

To **overwrite** a stored reference continue by referring to chap. 14.2.4

Further steps:

- **Loaded reference weight = 100 %**
  
  or
  
  - **Loaded reference weight = user defined [%]**

  **Loaded reference weight = 100 %**

- Select 100PER1, 2 or 3 (or own description) and confirm using the OK-key

- If required, place empty container on scale and tare.

- Load reference weight corresponding to 100 % (Minimum weight: Readability d x 100). Wait until stability display (⇒) has settled, then confirm using the OK-key.

- The reference will be imported and displayed.

- Confirm using the OK-key

- From now on the weight of the sample will be shown in percent based on the reference weight
Loaded reference weight = user defined [%]

⇒ Select ANYPER1 or 2 (or own description) and confirm using the OK-key.

⇒ Use the navigation keys to enter a percentage value of your choice and confirm using the OK-key.

⇒ If required, place empty container on scale and tare.

⇒ Load reference weight corresponding to the entered percentage value and confirm using the OK-key.

⇒ The reference will be imported and displayed.

⇒ Confirm using the OK-key.

⇒ From now on the weight of the sample will be shown in percent based on the reference weight.

14.2.2 Setting the display

⇒ In percentage mode, press the MENU-key.

⇒ Use the navigation keys ↑, ↓ to select <Display with load weight> and confirm using the OK-key.

⇒ Select <on> or <off> and confirm using the OK-key.

Setting <off>  Setting <on>
14.2.3 Performing calculation of percentage

⇒ In percentage mode, select stored reference and confirm using the OK-key (chap. 14.2.1).

⇒ Put empty container on the scale and tare.

⇒ Fill weighed good into container. The weight of the weighed good will be displayed in percent.

14.2.4 Change settings

⇒ In percentage mode, press the Menu-key.

⇒ Select <Changing registration> and confirm using the OK-key. The following changes may be made:

Product name:
Change name and confirm using the OK-key.

Reference weight:
Load weight and confirm using the OK-key.

⇒ The changes made will be displayed.

⇒ To return to percentage mode, press the ON/OFF-key.
14.2.5 Switching between percentage and weighing mode

14.3 Determining the density of solid matter and fluids

For density determination we recommend working with the optionally available density determination set.
The set contains all the accessories and aids required for easy and precise density determination.
For instructions please see the operating instructions enclosed with the density determination set.
14.4 Totalization

This function is used to automatically add any number of single weighings to a total sum.

When the standstill control (is complete the weighing value is automatically issued to an optional printer or a PC. The displayed value is added into the total adding memory. Afterwards automatic taring will take place. This is repeated newly every subsequent time a new sample is placed on the balance. When the last single weighing process is finished, press the PRINT key to receive the total sum ("TOTAL=").

- For selecting an application see chap. 11.1.4

The available application will be displayed.

- Use the navigation keys ↑, ↓ to select <Add-on>. The framing will indicate the current selection.

- If required, place the empty container on the scale and tare.

- To start the add-up sequence, press the OK-key.
  If connected to an optional printer, a header will be issued.

- Place first good to be weighed on balance. When the standstill control (is complete the weighing value is automatically issued to the optional printer. The displayed value is added into the total adding memory. Afterwards automatic taring will take place.
⇒ Repeat this sequence for each additional component.

⇒ To complete the sequence and to display the total, press the PRINT-key.

⇒ To start another add-up sequence, press the OK-key.

**Data output:**

⇒ In totalizing mode press MENU button.

⇒ Use the navigation keys ↑, ↓ to select <Print> and confirm using the OK-key.

1. **Output item number**

⇒ Use the navigation keys ↑, ↓ to select <Element No. output> and confirm using the OK-key.

⇒ Select <on> or <off> and confirm using the OK-key.

### Sample log

<table>
<thead>
<tr>
<th>ADDON MODE</th>

⇒ Return to add-on mode by pressing the ON/OFF-key.
14.5 Formulation

14.5.1 Free formulating
This function can be applied to add weighing different components of a compound. For monitoring purposes the weight of all components (N001, N002 etc.) as well as the total weight may be issued to an optional printer or PC. The balance works with a separated memory for the weight of the weighing container and of the recipe components.

1. Selecting an application
⇒ see chap. 11.1.4.

The available applications will be displayed.

⇒ Use the navigation keys ↑, ↓ to select <Formulation mode>. The framing will indicate the current selection. Confirm using the OK-key.

2. Weighing components
⇒ If required, place the empty container on the scale and tare.
⇒ To start the recipe sequence, press the OK-key.
   If connected to an optional printer, a header will be issued.

⇒ Determine initial weight of first component. Wait until stability display ( ) has settled down, then press the OK-key. The weighing result will be issued automatically and added to the add-on memory. Afterwards automatic taring will take place. The balance is ready to weigh-in the second component.
Weigh additional components as described above.

To complete the recipe, press the PRINT-key. The total will be displayed and issued.

To start a new recipe, press the OK-key.

Data output:

In recipe mode, press the MENU-key.

Use the navigation keys ↑, ↓ to select <Print setting> and confirm using the OK-key.

1. Output item number

Use the navigation keys ↑, ↓ to select <Element No. output> and confirm using the OK-key.

Select <on> or <off> and confirm using the OK-key.

<table>

<td>4,999[9]g</td>
</tr>
<tr>
<td>TOTAL = 74.917[2]g</td>
<td></td>
</tr>
</tbody>
</table>

⇒ To return to recipe mode, press the ON/OFF-key.
14.5.2 Define and process formulations
The scale has an internal memory for complete recipes and their components as well as the corresponding parameters (such as recipe name, tolerances, automatic taring etc.). During the processing of these recipes the scale will guide you step-by-step through the initial weighing process of components.

 défini
defining recipes

1. Selecting an application
☞ see chap. 11.1.4.

The available applications will be displayed.

☞ Use the navigation keys ↑, ↓ to select <Recipe preparation>.
The framing will indicate the current selection. Confirm using the OK-key.

2. Select recipe
☞ Use the navigation keys ↑, ↓ select the desired recipe <RECIPE 1 - 5> and confirm using the OK-key.

3. Recipe name (at initial input)

To overwrite a saved recipe please refer to chap. 14.1.4
The display used to enter a recipe name will appear during an initial input.
Confirm <Recipe name> by pressing the OK-key.
Enter the recipe name such as MiHo-Creme and confirm using the OK-key.

- Use the navigation keys ↑, ↓ to select <Subtracting the tare> and confirm using the OK-key.

- Select desired setting
  
  **Manual:**
  After saving the weighing value of a component by pressing the OK-key taring will take place after pressing the TARE-key.

  **Automatic:**
  After saving the weighing value of a component by pressing the OK-key automatic taring will take place.

5. Define components

- Use the navigation keys ↑, ↓ to select a component <Component 1 - 10> and confirm using the OK-key.

- Use the navigation keys ↑, ↓ to select <Setting> and confirm using the OK-key.
  Set parameters for component one by one.

**Component name**

- Enter component name such as milk (max. 20 characters) and confirm using the OK-key.
Weighing unit
⇒ Select weighing unit and confirm using the OK-key

Component weight
⇒ Enter weight and confirm using the OK-key

Tolerance of components
⇒ Enter tolerance and confirm using the OK-key

⇒ Repeat step 5 for all components of the recipe

⇒ To return to recipe mode, press the ON/OFF-key
Process recipe

1. Selecting an application
   ⇒ see chap. 11.1.4.
   
   The available applications will be displayed.
   
   ⇒ Use the navigation keys ↑, ↓ to select <Recipe preparation>.
   The framing will indicate the current selection. Confirm using the OK-key.

2. Select recipe
   ⇒ Use the navigation keys ↑, ↓ to select desired recipe such as MiHo-Creme and confirm using the OK-key.
   
   ⇒ The balance is ready for weighing the first component. The number for the component (such as 1 of 6), component name and the target weight will be displayed.
   ⇒ Load weighing container and tare.

3. Determine initial weight of component
   ⇒ Determine initial weight of first component. The weighing aid diagram with its tolerance markers facilitates the determination of the initial weight as a target value.
   
   ⇒ Wait for stability sign (Apply the achieved target value by pressing the OK-key.
   Depending on the setting, the display will be reset to zero either automatically, or by pressing the TARE-key.
   The balance is ready to weigh the second component.
Further components can be weighed as described for the first component. All determined singles values applied by OK-key will be saved.

4. Completing a formulation

Once the last component has been applied, the result of the recipe will be displayed and issued automatically.

Finish recipe by pressing the OK-key. The memory will be deleted. A new formulation may be started.

14.5.3 Change recipe

In recipe mode press MENU button.

Select <Changing registration> and confirm using the OK-key.

Make changes as described in section "Define recipe".
### 14.5.4 Sample log (KERN YKB-01N):

<table>
<thead>
<tr>
<th>NAME</th>
<th>Recipe name</th>
<th>1. Component</th>
</tr>
</thead>
<tbody>
<tr>
<td>MIHO-CREME</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

| N001 | Component | TGT= 47.000[0] g | RNG= 0.100[0] g | WEI= 47.014[1] g | DIF= 0.014[1] g |

| N002 | Component | TGT= 95.000[0] g | RNG= 0.100[0] g | WEI= 95.005[7] g | DIF= 0.005[7] g |

| N003 | Component | TGT= 8.000[0] g  | RNG= 0.100[0] g | WEI= 7.990[6] g  | DIF= 0.009[4] g |

**TOTAL = 151,222[8]g**

For settings for data output, see chap. 14.5.1 "Data output".
14.6 Preparing buffer solutions

The factory setting provides the scale with the following 13 recipes for preparing buffer solutions:

<table>
<thead>
<tr>
<th>No.</th>
<th>Substance amount concentration</th>
<th>Buffer system</th>
<th>pH value</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>100mM</td>
<td>Phosphoric acid (sodium)</td>
<td>pH = 2.1</td>
</tr>
<tr>
<td>2</td>
<td>10 mM</td>
<td>Phosphoric acid (sodium)</td>
<td>pH = 2.6</td>
</tr>
<tr>
<td>3</td>
<td>50mM</td>
<td>Phosphoric acid (sodium)</td>
<td>pH = 2.8</td>
</tr>
<tr>
<td>4</td>
<td>100mM</td>
<td>Phosphoric acid (sodium)</td>
<td>pH = 6.8</td>
</tr>
<tr>
<td>5</td>
<td>10mM</td>
<td>Phosphoric acid (sodium)</td>
<td>pH = 6.9</td>
</tr>
<tr>
<td>6</td>
<td>20mM</td>
<td>Citric acid (sodium)</td>
<td>pH = 3.1</td>
</tr>
<tr>
<td>7</td>
<td>20mM</td>
<td>Citric acid / caustic soda</td>
<td>pH = 4.6</td>
</tr>
<tr>
<td>8</td>
<td>10mM</td>
<td>Tartaric acid (sodium)</td>
<td>pH = 2.9</td>
</tr>
<tr>
<td>9</td>
<td>10mM</td>
<td>Tartaric acid (sodium)</td>
<td>pH = 4.2</td>
</tr>
<tr>
<td>10</td>
<td>20mM</td>
<td>Acetic acid (ethanolamine)</td>
<td>pH = 9.6</td>
</tr>
<tr>
<td>11</td>
<td>100mM</td>
<td>Acetic acid (sodium)</td>
<td>pH = 4.7</td>
</tr>
<tr>
<td>12</td>
<td>100mM</td>
<td>Boracic acid (potassium)</td>
<td>pH = 9.1</td>
</tr>
<tr>
<td>13</td>
<td>100mM</td>
<td>Boracic acid (sodium)</td>
<td>pH = 9.1</td>
</tr>
</tbody>
</table>

1. Selecting an application

⇒ see chap. 11.1.4.

The available applications will be displayed.

⇒ Use the navigation keys ↑, ↓ to select <Buffer solution preparation>. The framing will indicate the current selection. Confirm using the OK-key.
2. Selecting a buffer system

☞ Use the navigation keys ↑, ↓ to select the desired buffer solution from the list and confirm using the OK-key.

<table>
<thead>
<tr>
<th>Buffer System</th>
<th>pH</th>
</tr>
</thead>
<tbody>
<tr>
<td>10mM phosphoric acid (sodium) pH 2.1</td>
<td></td>
</tr>
<tr>
<td>10mM phosphoric acid (sodium) pH 2.6</td>
<td></td>
</tr>
<tr>
<td>50mM phosphoric acid (sodium) pH 2.8</td>
<td></td>
</tr>
<tr>
<td>100mM phosphoric acid (sodium) pH 6.8</td>
<td></td>
</tr>
<tr>
<td>10mM phosphoric acid (sodium) pH 6.9</td>
<td></td>
</tr>
</tbody>
</table>

3. Tolerance of components

☞ Press MENU button
☞ Select <Permissible error> and confirm using the OK-key.
☞ Enter tolerance and confirm using the OK-key, selectable 0.0001g – 9.9999g.
☞ To return to the previous menu, press the MENU-key.

4. Enter volume

☞ Enter volume and confirm using the OK-key.

☞ The balance is ready for weighing the first component. Displays the component name and the nominal weight.
☞ Load weighing container and tare.
5. Add components

⇒ Weigh displayed component.
   The weighing aid diagram with its tolerance markers facilitates the determination of the initial weight as a target value.

⇒ Wait for stability sign (➔). Apply the achieved target value by pressing the OK-key.

⇒ Add the displayed volume of the second component using a chemical dropper.

⇒ Confirm using the OK-key

6. Completing a formulation

⇒ Once the last component has been applied, the result will be displayed and issued automatically.

⇒ Finish by pressing the OK-key. The memory will be deleted. A new formulation may be started.
### 14.7 Sample preparation

This function is used to calculate and prepare standard solutions with a special component based on hydrochloride or hydrate.

The following sample types are available.

<table>
<thead>
<tr>
<th>Sample Type</th>
<th>Formula</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salts (Hydrochloride)</td>
<td>Target weight (g) = ( \frac{\text{Molecular weight}}{\text{Molecular weight} - \text{weight of salt} \times 36.45} \times \text{active substance (g)} )</td>
</tr>
<tr>
<td>Molecular weight</td>
<td>Target weight (g) = ( \frac{\text{Molecular weight}}{\text{Molecular weight of active substance}} \times \text{active substance (g)} )</td>
</tr>
<tr>
<td>Hydrate</td>
<td>Target weight (g) = ( \frac{\text{Molecular weight}}{\text{Molecular weight} - \text{weight of hydrate} \times 18.02} \times \text{active substance (g)} )</td>
</tr>
<tr>
<td>Purity</td>
<td>Target weight (g) = ( \frac{100%}{\text{Purity} \times \text{Purity (g)}} \times \text{active substance (g)} )</td>
</tr>
</tbody>
</table>

**Define sample preparation**

For selecting application, see chap. 11.1.4

The available applications will be displayed.

Use the navigation keys ↑, ↓ to select <Sample preparation>. The framing will indicate the current selection. Confirm using the OK-key.
For a first entry the display for entering a memory name will appear. Use the navigation keys ↑, ↓ to select a memory space and confirm using the OK-key.

If required, change name and confirm using the OK-key.

To overwrite a saved sample please continue by referring to chap. 0

⇒ Use the navigation keys ↑, ↓ to select sample type and confirm using the OK-key. Options: <Hydrate> <Purity> <Molecular weight> <Hydrochloride>

⇒ Enter the weight for the required active substance and confirm using the OK-key.

⇒ Enter tolerance and confirm using the OK-key.

⇒ Enter molecular weight of component and confirm using the OK-key.

⇒ Enter quantity of chloride groups and confirm using the OK-key.

⇒ Save by pressing the OK-key. The values for the samples will be displayed.
Preparing a sample

1. Select <Sample preparation> application
   ➔ See previous paragraph "Define sample preparation"

2. Select sample
   ➔ Use the navigation keys ↑, ↓ to select the desired sample and confirm using the OK-key.
   ➔ The balance is ready for weighing the first component. The number for the component (such as 1 of 6), component name and the target weight will be displayed.
   ➔ Load weighing container and tare.

3. Determine initial weight for component
   ➔ Weigh the component until the target weight is identical to the gross weight. The weighing aid graph with its markers facilitates matching the initial weight to the target weight.

14.7.1 Changing saved samples
   ➔ In sample mode press MENU button.
   ➔ Select <Register active sample> and confirm using the OK-key.
   ➔ Make changes as described in the previous paragraph.
14.8 Statistics
The Statistics function facilitates the statistical evaluation of weighing values.

Combinable functions:
Standard weighing mode, parts counting, percentage determination, animal weighing, density determination <Solids>, density determination <Liquids>

1. Select application to be applied to statistics
⇒ see chap. 11.1.4.

The available applications will be displayed.
Use the navigation keys ↑, ↓ to select the desired application.
The framing will indicate the current selection. Confirm using the OK-key.

2. Start statistics
⇒ Press MENU button.
⇒ Select <Statistical calculation> and confirm using the OK-key.

⇒ Start <Start Statistical calculation> and confirm using the OK-key.
The header will be issued to an optional printer.
⇒ Put first weighed good on weighing platform and wait for stability sign ( ).
⇒ Save weighing value to statistics by pressing the PRINT-key.
⇒ Put additional weighed good on platform and save each weighing value to statistics by pressing the PRINT-key.
Each time you save a value it will be logged automatically.

3. Finish statistics
⇒ Press MENU button.
⇒ <End Statistical calculation>
The result will be issued automatically.
## Sample log

\[x: \text{Weighing Value}\]
14.9 Control weighing and target weighing
This function is used to determine the matching of a weighing value to the specified control values.
Control values can be exact target values (target weighing) or the limits set for the tolerance range (control weighing) within which the weighing value is to be kept.

14.9.1 Target weighing
This mode e.g. is used for weighing constant liquid quantities or for assessment of missing quantities or excess quantities.
The target value is the numeric value which corresponds to the nominal quantity of the used unit. Beside the target value a tolerance value is entered. This is a numerical value which is plus/minus over or under the acceptable target value. Reaching of target value is shown on the diagram. The tolerance marks [HI, OK, LO] indicate whether the weighed good is below, within or above the specified tolerances.

Settings

1. Calling Weigh Settings
In weighing mode press MENU button.
Press the R-Taste key and use the navigation keys ↑, ↓ to select < Weighing Settings> and confirm using the OK-key.

2. Activate function
Use the navigation keys ↑, ↓ to select <Target measurement> and confirm using the OK-key.
Select Settings <on> and confirm using the OK-key.

3. Setting target value
Select <Setting > and confirm using the OK-key.
Select <Target value> and confirm using the OK-key.

Enter target value and confirm using the OK-key.

4. Setting tolerance

Select <Tolerance range> and confirm using the OK-key.

Enter tolerance and confirm using the OK-key.

To return to target weighing mode, press the ON/OFF-key.

Perform target weighing

If required, place empty container on scale and tare.

Place weighed goods and wait until the tolerance mark [HI, OK, LO] appears. With the help of the tolerance mark check if the weighed goods are under, inside or over the default tolerance.
The tolerance marks provide the following information:

<table>
<thead>
<tr>
<th>Condition</th>
<th>Grading</th>
<th>Status Tolerance mark</th>
<th>Optical signal</th>
<th>Example:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weight more than the nominal weight and above the upper tolerance</td>
<td>Great difference to target value</td>
<td>![Image]</td>
<td>flashes slowly (Cycle: 1.5 - 2 s)</td>
<td>&lt; 150 g</td>
</tr>
<tr>
<td>Weight within tolerance (target value ± tolerance)</td>
<td>Target value accepted</td>
<td>![Image]</td>
<td>Not flashing</td>
<td>99.9990 – 100.0010 g</td>
</tr>
<tr>
<td>Weight less than nominal weight and below the lower tolerance</td>
<td>Great difference to target value (&gt; 25 %)</td>
<td>![Image]</td>
<td>flashes fast (Cycle: 0.5 - 1 s)</td>
<td>&gt; 75 g</td>
</tr>
<tr>
<td>Small difference to target value</td>
<td>![Image]</td>
<td>flashes slowly (Cycle: 1.5 - 2 s)</td>
<td>&gt; 50 g</td>
<td></td>
</tr>
</tbody>
</table>

14.10 Control weighing (Pass / Fail evaluation)

In many cases not the nominal value of the weighed goods is the decisive parameter, but the deviation from this nominal value. Such applications are for example the weight check of equivalent packages or the process check of parts in a fabrication process.

By entering the upper and lower limit you can ensure that the weighed weighed good remains exactly within the set tolerance range at all time.

If the values of limits are exceeded or not reached this will be indicated by the displayed indicators ![HI], ![OK] or ![LO].
Settings

1. Calling Weighing Settings
   In weighing mode press MENU button.
   Press the R-Taste key and use the navigation keys ↑, ↓ to select <Weighing Settings> and confirm using the OK-key.

2. Activate function
   Use the navigation keys ↑, ↓ to select <Pass/fail evaluation> and confirm using the OK-key.

   Select Settings <on> and confirm using the OK-key.

3. Setting limits
   Select <Setting > and confirm using the OK-key.

   Define the limits one by one and confirm using the OK-key.
   When entering the limit values ensure that the values match logically one with another, i.e. the lower limit value must not be greater than the upper one.

   To return to control mode, press the ON/OFF-key
Perform control weighing

- If required, place empty container on scale and tare.

- Place weighed goods and wait until the tolerance mark [HI, OK, LO] appears. Apply the tolerance markers to check whether the weighed good is within the set tolerance range.

**Input example:**

- Max. limit: 40.0000 g
- Upper limit: 30.0000 g
- Lower limit: 10.0000 g
- Min. limit: 20.0000 g

<table>
<thead>
<tr>
<th>Weighing Value</th>
<th>&gt; Max. limit</th>
<th>&gt; 40.0000g</th>
<th>Beyond tolerance limit. No tolerance mark shown.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upper limit &lt;  Weighing Value ≤ Max. limit</td>
<td>&gt;30.0000g – 40.0000g</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Lower limit ≤ Weighing Value ≤ Upper limit</td>
<td>≥20.0000g – 30.0000g</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Min. limit ≤ Weighing Value &lt; Lower &lt; limit</td>
<td>10.0000 g – 19.9999 g</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Weighing Value &lt; Min. limit</td>
<td>&lt; 10.0000 g</td>
<td>Beyond tolerance limit. No tolerance mark shown.</td>
<td></td>
</tr>
</tbody>
</table>

14.11 Minimum sample weight

The default setting for the function "Minimum initial weight" is “locked”.

Settings can only be defined locally in connection with a DakkS calibration. For further information please go to KERN-Homepage (www.kern-sohn.com).
15 Interfaces
Via the interfaces weighing data may be exchanged with connected peripheral devices.
Issue may be made to a printer, PC or control displays. In the same way, control commands and data inputs may be made via the connected devices (such as keyboard, barcode reader).

15.1 Connect printer

Turn off scale and printer.
Use a suitable cable to connect the weighing balance to the interface of the printer.
Faultless operation requires an adequate KERN interface cable (optional).
Turn on scale and printer.
Communication parameters (Baud rate, bits and parity) of scale and printer must match, see chap. 15.7

15.2 Connect PC

Turn off scale and connect it to a PC as shown on the diagram.
Switch on balance
The USB driver will be installed automatically.
If required, a suitable driver is available for downloading from our KERN- Homepage www.kern-sohn.com, / Downloads. Select the driver version compatible with your system and execute the exe file.
We recommend our transfer software ‘Balance Connection KERN SCD 4.0’ for the import of data to a PC program.
15.3 Connect serial devices / connect programmable controller (SPS / PLC)

Turn off scale and device.
Connect scale to interface of device, using a suitable RS232C cable.
Faultless operation requires an adequate KERN interface cable (optional).
Turn on scale and device.
Adapt communication parameter of scale and device, see chap.
Data is issued or received via the PRINT-key or control commands.

15.4 Interface cable (RS232)

*only if the balance can send a feedback to the PC (without error: OK [C/R], at error NG [C/R].

15.7.1 Select standard setting

1. Call function

Press and hold PRINT-key for approx. 3 sec.

Use the navigation keys to select <Communication setting> and confirm using the OK-key.

Use the navigation keys to select interface and confirm using the OK-key.
2. Select setting

The available settings will be displayed, see chap. 15.7

- Standard
- Extended
- Type M
- Type S
- Type A
- User setting

Select Settings with the help of the navigation keys and confirm using the OK-key.

Use the ON/OFF button to return into weighing mode

15.7.2 User defined settings (display example for KERN YKB-01N)

Every communication parameter can be set individually in the menu item "User setting".

Call function:
Press and hold PRINT-key for approx. 3 sec.

Use the navigation keys to select <Communication setting> and confirm using the OK-key.

Use the navigation keys to select interface and confirm using the OK-key.

Use the navigation keys to select <User setting> and confirm using the OK-key.

Setting communication parameters:
Use the navigation keys to select the available settings one by one and confirm using the OK-key.
1. Communication speed (Baudrate)
Use the navigation keys to select <Communication speed> and confirm using the OK-key. 
Select setting and confirm using the OK-key.

2. Parity
Use the navigation keys to select <Parity> and confirm using the OK-key. 
Select setting and confirm using the OK-key.

None   Small parity, 8 bit
Odd    Odd parity, 7 bit
Even   Straight parity, 7 bit

3. Stop bit
Use the navigation keys to select <Stop bit> and confirm using the OK-key. 
Select setting and confirm using the OK-key.

1       1 bit
2       2 bit

4. Handshake
Use the navigation keys to select <Handshake> and confirm using the OK-key. 
Select setting and confirm using the OK-key.

OFF    No handshake
HARD   Hardware Handshake
SOFT   Software Handshake
TIMER  Timer Handshake

5. Data format
Use the navigation keys to select <Data format> and confirm using the OK-key. 
Select setting and confirm using the OK-key.
6. Final character

Use the navigation keys to select <Delimiter> and confirm using the OK-key. Select setting and confirm using the OK-key.

Return to weighing mode

Press ON/OFF repeatedly or for 3 s.

15.8 Issue functions

15.8.1 Automatic data output / Auto Print function

Data output happens automatically without having to press the PRINT-key as soon as the corresponding output condition has been met, dependent on the setting in the menu.

The icon will be displayed while the function is enabled. Not combinable with the continuous data output.

Call function:

Press and hold PRINT-key for approx. 3 sec. <Print> Confirm using the OK-key.

Select Settings <Auto print> and confirm using the OK-key.

Select Settings <on> and confirm using the OK-key.
Set output condition:
Use the navigation keys to select <Setting> and confirm using the OK-key.

Use the navigation keys to select the desired setting and confirm using the OK-key.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stable/positive value</td>
<td>Single output for stable and positive weighing value.</td>
</tr>
<tr>
<td>Stable/negative value</td>
<td>Single output for stable and positive or negative weighing value.</td>
</tr>
<tr>
<td>Stable at zero</td>
<td>Single output for stable and positive weighing value. New output only after zero display and stabilisation</td>
</tr>
<tr>
<td>Pass/ Fail</td>
<td>If the Auto Print function is connected to the check weighing function, data of stable weighing values are output with indicator display OK.</td>
</tr>
<tr>
<td>Set zero value limit [Zero]</td>
<td>Another output when the display goes back to zero. Setting for priority of accuracy</td>
</tr>
<tr>
<td>Set zero value limit [50 % of previous output]</td>
<td>Another output when the display goes back to 50% of the previous weighing value. Setting for priority of accuracy</td>
</tr>
</tbody>
</table>

Return to weighing mode
Press the ON/OFF button.
From here on the Auto Print function is active, the indicator is displayed.

Place goods to be weighed on balance.

신청 If required, place empty container on scale and tare.
신청 Place weighed goods and wait until the stability display (대기) appears. The weighing value is issued automatically.
신청 Remove the weighed good.

15.8.2 Continuous data output

The icon will be displayed while the function is enabled.
Not combinable with automatic data output.
Call function:
Press and hold PRINT-key for approx. 3 sec.
<Print> Confirm using the OK-key.

Select Settings <Interval timer> and confirm using the OK-key.

Select Settings <on> and confirm using the OK-key.

Setting output interval:
Use the navigation keys to select <Setting> and confirm using the OK-key.

Use the navigation keys to select Interval and confirm using the OK-key, selectable 00:00 – 99:59 min.

Return to weighing mode
Press the ON/OFF button.
From that point onwards continuous data output will be enabled and the indicator will be displayed.

Place goods to be weighed on balance.
☞ If required, place empty container on scale and tare.
☞ Place goods to be weighed,
☞ The weighing values are issued according to the defined interval.

Continuous data output may be cancelled and restarted with the help of the PRINT-key.
15.8.3 GLP Output Function

With the GLP Output function the printouts of weighing results are completed with a bottom row and a head line. The content of the header and footer are selectable.

Call function:
Press and hold the CAL-key for approx. 3 sec.
Confirm <GLP output> by pressing the OK-key.

Select Settings <on> and confirm using the OK-key.

Set output condition:
Use the navigation keys to select <Setting> and confirm using the OK-key.

Use the navigation keys to define the contents for the header and footer one by one, each time confirming by pressing the OK-key.

Return to weighing mode
Press the ON/OFF button.

Enter scale identification number, see chap. 13.3
15.8.4 Defining output details
When the function is enabled you can in addition to weighing value issue the date, time, barcode ID and sample name.

Call function:
Press and hold PRINT-key for approx. 3 sec.
Confirm <Print> using the OK-key.

Setting output details:
Use the navigation keys to enable [on] the desired details one by one [on], confirming each time by pressing the OK-key.

- Date/time printed
- Barcode ID printed
- Sample ID printed

Return to weighing mode: Press the ON/OFF button.

Sample log:

<table>
<thead>
<tr>
<th>Date</th>
<th>Time</th>
<th>Barcode ID (max. 22 characters)</th>
<th>Sample description</th>
<th>Measuring Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>DATE 2018 Oct. 07</td>
<td>TIME 18:31:34</td>
<td>23456780123456789012</td>
<td>AAAAA0008</td>
<td>175.9320 g</td>
</tr>
</tbody>
</table>

You may also define the output details via System Settings
(See chap. 11.1.3).
The barcode ID may also take place with the help of a barcode reader or a PC keyboard.
15.10 USB connection
The USB interfaces are used to issue adjustment and weighing data. In the same way control commands and data entries may be entered via the connected devices (PC keyboard, barcode reader).

Connecting devices:

Switch off the balance
Connect USB equipment as shown on the diagram
Switch on balance.

USB equipment and application.

<table>
<thead>
<tr>
<th></th>
<th>Data input</th>
<th>Data transmission</th>
<th>USB Hub</th>
</tr>
</thead>
<tbody>
<tr>
<td>Save weighing data and adjustment logs</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
15.10.1 Edit weighing data, adjustment logs and screenshots to USB medium

☐ Preparation

Call function
Call System Settings

Use the navigation keys ↑, ↓ to select <Memory save setting> and confirm using the OK-key.

The available menu items will be displayed.
- Save measured values to USB
- Save adjustment data to USB
- Issue internal memory
- File format USB (txt or CSV)

Select file format:
Use the navigation keys to select <USB saved data format> and confirm using the OK-key.

Confirm desired setting by pressing the OK-key.

Return to weighing mode: Press the ON/OFF button.
Save displayed value as screenshot

Call System Settings

Use the navigation keys to select ↑, ↓<Print> and confirm using the OK-key.

To enable <Screen capture> select Setting <on> and confirm using the OK-key.

Connect the scale to a PC keyboard by means of an USB hub, as shown on the diagram.

Save screenshot by pressing [Shift] + [Print] to USB stick.

⇒ Issue internal memory

Call Menu Item <Issue Internal Memory> as described above under "Preparation". Confirm using the **OK**-key

Confirm using the **OK**-key, data will be issued.

Return to weighing mode: Press the **ON/OFF** button.
15.10.2 Data transfer by means of barcode reader

Call System Settings and confirm using the OK-key.

Use the navigation keys to ↑, ↓ to select <Barcode transfer> and confirm using the OK-key.

The available menu items will be displayed.

- Transfer: All data
- Without commands
- No transmission

Confirm desired setting by pressing the OK-key.

Return to weighing mode: Press the ON/OFF button.

Application example for easy log-on (without password entry):
16 Servicing, maintenance, disposal

16.1 Cleaning

Before any maintenance, cleaning and repair work disconnect the appliance from the operating voltage.

Fig.1: Clean the balance

1. Display

Please do not use aggressive cleaning agents (solvents or similar agents), but a cloth dampened with mild soap suds.

2. Housing

Please do not use aggressive cleaning agents (solvents or similar agents), but a cloth dampened with mild soap suds. Take care that the device is not penetrated by fluids and polish it with a dry soft cloth.

Loose residue sample/powder can be removed carefully with a brush or manual vacuum cleaner.

Spilled weighing goods must be removed immediately.

3. Weighing pan

Remove weighing plate, clean it wet and dry it before installation.

4. Glass doors

These may be removed as described below and cleaned with a commercial glass cleaner.

Handle glass doors with care.

Attention: Risk of breakage
Risk of cuts.
Keep away your hands/fingers from the running rail.
1. Remove, screening ring, weighing plate and carrier of weighing plate

2. Remove the plastic handle by turning.

   Do no touch the support of the weighing plate. This could cause damage to the balance.

3. Remove glass door carefully acc. to fig.

4. Re-install the glass door in reverse order.

   To secure the glass door always reattach the plastic handle.

16.2 Servicing, maintenance

⇒ The appliance may only be opened by trained service technicians who are authorized by KERN.
⇒ Before opening, disconnect from power supply.
16.3 Disposal
Disposal of packaging and appliance must be carried out by operator according to valid national or regional law of the location where the appliance is used.

17 Instant help
Possible causes of errors:
In case of an error in the program process, briefly turn off the balance and disconnect from power supply. The weighing process must then be restarted from the beginning.

<table>
<thead>
<tr>
<th>Fault</th>
<th>Possible cause</th>
</tr>
</thead>
</table>
| The displayed weight does not glow. | • The balance is not switched on.  
  • The mains supply connection has been interrupted (mains cable not plugged in/faulty).  
  • Power supply interrupted. |
| The displayed weight is permanently changing | • Draught/air movement  
  • Glass doors not closed  
  • Table/floor vibrations  
  • Weighing pan has contact with other objects.  
  • Electromagnetic fields / static charging (choose different location/switch off interfering device if possible) |
| The weighing result is obviously incorrect | • The display of the balance is not at zero  
  • Adjustment is no longer correct.  
  • The balance is on an uneven surface.  
  • Great fluctuations in temperature.  
  • Electromagnetic fields / static charging (choose different location/switch off interfering device if possible) |
| The desired weighing unit cannot be called by UNIT key. | • Unit was not activated beforehand.  
  • Severe temperature variations in the room or the instrument  
  • Communication settings are wrong.  
  • The menu is locked Remove the menu lock. |
| Automatic adjustment carried out frequently. |  |
| No data transfer between printer and balance. |  |
| The menu settings cannot be changed. |  |
18 Ionizer (factory option)

18.1 General
The ionizer has conductive peaks supplied by high voltage which, based on corona discharge, generate positively and negatively charged ions in the immediate vicinity. These are attracted by the electrostatic charge of goods to be weighed and, thus, neutralise the interfering electrostatic charge. This also does away with the forces falsifying the weighing (such as falsified weighing result, weighing value drifted).

18.2 Basic Safety Precautions

WARNING

The use of ionizer is only intended in combination with electronic weighing balances. Do not use for any other purposes.

Never operate the ionizer in explosive environment. The serial version is not explosion protected.

Protect the ionizer against high air humidity / temperature, steams and dust;

Take care to select a location free of water and oil

Do not expose the ionizer to strong humidity for extended periods. Non-permitted condensation (condensation of air humidity on the appliance) may occur if a cold appliance is taken to a considerably warmer environment. In this case, acclimatize the disconnected ionizer for ca. 2 hours at room temperature.

Whilst the ionizer is switched on, do not touch the ion source; see sticker on the left side.

In case of smoke development, smell of fire, strong heating-up of the ionizer or when the red LED starts glowing, turn off the ionizer immediately and disconnect it from the mains.

If water or other foreign matter enters the ionizer, turn off the master switch immediately and disconnect it from the mains.

On account of the high voltage technology, handle the ion source and exits with care.

Do not take apart or modify the ionizer.
Prevent damage caused by dropping, vibration or shock; see sticker on the left side.

Always use the genuine power pack. The stated voltage value must be the same as the local voltage.

Risk of injury! The peaks of the ion source are sharp and cutting.

The ionizer generates poisonous ozone; ensure sufficient ventilation.

For maintenance and repair work disconnect the ionizer from the mains.

Disconnect the ionizer from the mains during periods of idleness.

**CAUTION**

Maintain and clean the ionizer at regular intervals.

Cleaning of electrode probes: Every 1 000 hours
Replacement of electrode probes: Every 30 000 hours

Starting up a damaged ionizer may result in a short circuit, fire or electric shock.

Starting up out of doors and inside vehicles is prohibited and will result in total loss of warranty.

The occurrence of electromagnetic fields may result in major display deviations (incorrect weighing results). Discharge sample at a sufficient distance from the weighing balance.

During normal operation the green LED [POWER] will be glowing, in case of a breakdown the red LED [ALARM].

If the red LED is glowing, turn off the ionizer at the master switch and turn it on again. If the red LED continues to glow, inform the manufacturer.

The Blue LED [RUN] on the front of the ionizer illuminates to indicate that the instrument is now generating ion for static removal operation.

There is sound of operation during an ion generation, it is not failure.

18.4 Commissioning

Switch on balance
Connect network adapter of ionizer to scale, as shown on diagram.
Connect network adapter of ionizer to power supply.

Turn on ionizer as shown on diagram [on].
The display 🔄 lights up.
Ionization

Check to make sure that the green LED [Power] indicator light for the ionizer is illuminated.

Close wind protection doors.

Press key + to start ionization. The blue LED [RUN] on the front of the ionizer illuminates to indicate that the instrument is now generating ion for static removal operation. The length of time depends on the menu setting <System Settings > Ion irradiation time >.

Set irradiation time for ions

Call System Settings and confirm using the OK-key.

Use the navigation keys to ↑, ↓ to select <Ion irradiation time> and confirm using the OK-key.

Confirm desired setting by pressing the OK-key.

Return to weighing mode:
Press the ON/OFF button.
18.5 Maintenance and cleaning

Be sure to carry out maintenance and cleaning work on a regular basis.

Cleaning of electrode probes: Every 1 000 hours
Replacement of electrode probes: Every 30 000 hours

WARNING

Disconnect the device from the mains before cleaning.
Do not disassemble
Gently wipe the electrode probes without bending them.

Cleaning

Do not use aggressive cleaning agents (solvents etc.) instead clean with a soft cloth soaked in mild soap suds. Take care that the device is not penetrated by fluids and polish it with a dry soft cloth.
Remove loose sample residues / powder carefully with the help of a brush or handheld vacuum cleaner.
For cleaning the ion source use the supplied cleaning brush or a cotton stick moistened with alcohol. Take care that the peaks are not bent.
When the internal part of the electric discharge section is dirty, please blow off the dirt inside with an air compressor gun / air duster (dry type, which do not spray cleaning solution while blowing ), etc.
